

Light Duty Vibrating Screen

Product Overview

The light duty vibrating screen is widely used for screening dry powder, fine particle and fine powder in chemicals, plastics, pharmaceuticals, resin powder, ceramic, metallurgy, building materials, food, fertilizer industries and many other industries. It can be operated for rough screening at a high processing capacity. Furthermore, adjustment of production can be easily achieved by controlling the angle of screen plate. It is built with a full enclosure structure and wearable lining plate. The vibration motor or linear self-vibration source is adopted.
